                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                VRFFAE-SGINNLTISSEVVNRGYAMSQRWVMDKITILGLKRRVKIKEYTVQKDAGAIKV 871
                       The invention relates to a recombinant vector containing alpha-glucosidase gene derived from buckwheat. A transformant containing the recombinant vector can be used for preparing alpha-glucosidase by culturing the transformant and isolating alpha-glucosidase from the culture. This sequence represents a buckwheat alpha-glucosidase protein.
                                                                                                                                                                                                                                                                                                                                 6
                                                                                                                                                                                                                                                                                                                                                                                90

This invention describes a novel potato alpha-glucosidase (I). (I) is used to produce transgenic plants (or plant or bacterial cells) that produce starch with modified degrees of branching, amplose/amylopectin ratio, phosphate content, starch granule size and/or sidechain structure, and thus altered physical and chemical properties. This starch is used for all usual applications, particularly in preparation of foods, packaging materials and disposable articles, but also for hydrolysis to glucose (for manufacture; in adhesives; for treating textiles; for soil stabilization; as wetting agent in plant protection and fertilizer compositions; as binding agent in pharmaceuticals and cosmetics; as additive for rubber, building materials, leather and in casting; as flockulant for soil or coal slurries; and in polymers, as simple filler or reactive component, e.g. in polywrethane feams. Modified starch produced using plants that contain (I) are easily hydrolyzed, reducing the requirement for expensive enzymes. This sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          319 YWAFGFHQCRWGYRDVNEIETVVDKYAEARIPLEVMWTDIDYMDAFKDFTLDPVHFPLDK 378
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      94 YWSFGFHQCRWGYKNIDDVELVVDSYAKSRIPLEVWMTDIDYMDGFKDFTLDPVNFPLER 153

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (1) in a test sample condetermining the expression profile of a gene group in the sample comprising genes selected from (1). The method is useful for examining the ischaemic condition (e.g. compression levels of particular genes (ABI99202 to ABI99912, encoding expression levels of particular genes (ABI99202 to ABI99912, encoding the protein sequences in ABB57020 to ABB59912, encoding the protein profile of a gene group comprising these genes are expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic condition improving represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                103
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      455

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents Endomyces fibuliger (also called Saccharomycopsis fibuligera) glucoamylase GLA2. The invention describes the recombinant GLA2 enzyme, which is useful for hydrolysing carbohydrate-containing materials, especially materials containing rice carbohydrates. The glucoamylase is used to produce glucose and alcohol from starch containing raw materials. GLA2 is useful for hydrolysing carbohydrate containing materials e.g. mixtures of a source of proteins and a source of carbohydrates, especially a mixture of leguminous plant or of a cooked oleaginous plant and of a cooked or roasted cereal source e.g. a mixture of soya or cooked beans and of cooked or roasted wheat or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          84

GTase can be obtained effectively using this method and in larger quantities. The probes (AAQ50466-67) were used to detect transformants containing the GTase gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Prepn. of glucosyl:transferase - using glucosyl:transferase gene from recombinant DNA of Aspergillus niger

The protein preferably catalyses the glucose transfer of an alpha-1 right arrow 3 bond or the glucose transfer of an alpha-1 right arrow 4 bond to a sugar receptor by reacting with a substrate selected from starch and its decomposition

              A cosmid library is constructed from genomic DNA of ATCC26076 and this screened for inserts contg. the AA gene by ability to transform S.cerevisiae GRP 18 to histidine prototrophy. One positive cosmid (32kb; pYc1) was digested with EcoRI, religated and used to transform E.coli JA221. A GA-contg. cosmid (about 40 kb) was isolated. This was cut with BamHI and religated to give the plasmid pcJD5-AMGI contg. a 12kb fragment (in AAN81526).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    HSDLAFTLFHTTPFGFTIYRKSTHDVLFDATPIPSNPTTFLIYKDQYLQLSSSLPAQQAH

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  In AAQOG383-87.
F is e.g. a cellulase, interleukin, insulin-like-growth factor, interferon etc.
T is pref. all or part of the terminator of this sequence (bp 2875-3320).
GAM1 acts as selective marker for the vector carrying the expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The expression cassette may contain a regulon (R), a signal peptide sequence (S), a foreign protein sequence (F) and a terminator (T) of which R and/or S and/or T are derived from the glucoamylase gene of S. occidentalis.

R is pref. a 1.3 kb BamHI-PvuII fragment (bases -1 to -320 of this sequence).

S contains all or part of one of the sequences represented
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match 27.2%; Score 1321.5; DB 11; Length 958; Best Local Similarity 33.2%; Pred. By inserting at least one of the enhancer elements into a promoter region which is functional in fungi, the activity of the promoter is enhanced Using such improved promoters, a gene of interest can be expressed efficiently in transformed fungi. The present sequence is encoded by the agdA gene.
                                                                                                                                                                                                                                                                                                                                       Fungal DNA enhancer element - used to transform other host fungus e.g Aspergillus oryzae, to produce large quantities of a gene

This sequence is the human hSI protein. The invention relates to purified proteins (I) that bind specifically to at least one of the gastro-intestinal (GI) tract receptors human intestinal peptide-associated transporter (HPTI), hPEPTI, D2H and human percorist shown and animal GI tissue (into the blood) to respect through human and animal GI tissue (into the blood) for in vivo delivery, particularly for treatment or prevention of hypertension, diabetes, osteoporosis, haemophilia, anaemia, cancer, magraine, or angina pectoris. Specifically they are used to deliver insulin or leuprolide, but many other suitable therapeutic agents are disclosed, including genes or inhibitory nucleic acid, imaging agents and cancers. (I) may also provide targeting to the GI tract. Other uses of (I) are: (I) to determine the level of specified receptors in a sample (I) are: (I) to determine the level of specified receptors in a sample (I) are binding assay); and (ii) to screen for molecules that bind (I).

Immunogenic analogues or derivatives of (I) are used to raise antibodies measure (I), e.g. for imaging, monitoring treatment, tissue analysis etc., also for peptide purification and immobilisation. through, the gastrointestinal tract, e.g. insulin or leuprolide Disclosure; Fig 3; 294pp; English
